

RoHS and REACH Declaration Statement

To diversify our business into the commercial, military, and European marketplaces, we are required to comply with numerous industry and governmental regulations, which in all instances, must be flowed down to our suppliers. This declaration encompasses the implementation of EU RoHS 2011/65/EU directives, the absence of REACH banned substances (SVHC), and the Defense Federal Acquisition Regulation (DFAR 252.225-7009) defining the special provisions for the use of domestic specialty metals onto all of our products unless otherwise specified by contract.

I.F. Engineering Corp has made permanent design changes on all of our products that may have contained lead, or any banned substance not in compliance with the aforementioned directives. These design modifications, where applicable, incorporate the use of lead-free solder, RoHS/REACH compliant materials and non-hazardous substances during each stage of the manufacturing process. Our company incorporates these practices specifically in the areas of chassis plating/finishing, printed circuit board fabrication, component selection, and soldered assemblies.

Additionally, the use and handling of ozone depleting substances, and/or any other known health hazards are non-existent during the assembly and manufacture of our products. Nor does our product emit and/or dissipate any environmentally unsafe substances during operation or while in storage.

Sincerely,

Joe Schröder

Vice-President of Operations &
Corporate Compliance
